

Project Title

Cloth Rental Website

Description :

Description: The main objective of our project is to provide a platform for users to rent clothing items online. Users can browse through a variety of clothing items, view their details, and rent them for a specified period. The platform also provides information about the available items, their descriptions, sizes, colors, and rental prices. Users can search for specific items, add them to their cart, and proceed with the rental process. Additionally, there are three types of users in the system: Admin, Seller, and Customer. The Admin manages the overall system, the Seller uploads and manages clothing items, and the Customer browses and rents items.
